

WWRA 2005 General Membership Meeting

Curt, W7CLL gave everyone an excellent presentation on how to construct the economical and very popular J-pole antenna. Curt's presentation was very professional and included a practical demonstration in the form of a wooden antenna jig complete with diagram handouts for his audience. Curt carried it a step further and donated his demonstration model to be given up as the second door prize, which was won by Mike, W7MKY. For those of you who missed this neat learning experience a copy of the J-pole schematic/diagram is located on the website. Thanks Curt.
